Period: 2011-2012
Value: £560K
Location: London
Works: Structural waterproofing

The Project

SL Construction Services have successfully completed Major Structural Waterproofing and Roofing project for the **Aquatic Centre** in London. The project marks the third successful major project **SL Construction Services** has completed for the 2012 Olympics.

SL Construction Services has also completed a £1m structural waterproofing and roofing package at the Main Olympic Stadium; as well as car park roofing works for the Media Centre Car Park also on the Olympic Park.

The aquatics project saw early contractor involvement to value engineer structural waterproofing solutions for roofs for all the main areas of the Aquatics centre to include the installation of roofing insulation and finishes to podium roofs and major retaining walls.

SL Construction Services provided a dedicated Project Management team and direct installation team which worked as Tier 1 partner with Balfour Beatty's project management team at every stage of the project. **SL Construction Services** provided programme management, trade contractor co-ordination, build ability and value engineering to deliver a below budget, top quality solution some 4 weeks ahead of programme.
