

Client: Oldham NHS Trust
Name: Oldham Central Hospital
Period: July 2010
Value: £200K
Location: Oldham
Works: Roofing

The Project

SL Construction Services has successfully completed the roofing work to a new NHS Hospital for Carillion in Oldham. The project called for a roofing solution to be developed by **SL Construction Services** to accommodate a major provision of mechanical and electrical services and complicated finishes.

Early contractor involvement allowed **SL Construction Services** to work with Carillion's design team prior to commencing works on site to develop a technical proposal to an agreed budget and technical performance standard.

The system selected was an inverted roof with a waterproofing system 'Integritank' which is spray applied to accommodate all roof details and directional changes covered by insulation and paving slabs to include all rain water outlets.

The project was successfully completed on time and within budget and provides a maintenance free solution for the NHS trust.

The successful completion of the project underlines **SL Construction Services** ability to offer full roofing and cladding solutions to public sector clients on a national basis.
